

Joined Up Care Derbyshire – One Workforce Engagement – availability on remaining sessions

These engagement sessions aim to give partners across the health and care system opportunity to share their views on developing the One Workforce Strategy:

- To understand the **current state** of the workforce, areas of under representation, social mobility cold spots, culture, areas of best practice, challenges and risks.
- To understand 'left shift' priorities and sector specific strategic drivers to identify commonality, enable mutual understanding and what this means for a future workforce.
- To identify system collaboration opportunities and learning from all sectors to develop shared approaches where appropriate to attract, develop and retain a workforce and talent supply as part of a One Workforce approach.
- To identify and deploy widening participation programmes of work to recruit our local population and create career pathways across all sectors that will enable social mobility.
- To create new innovative routes and approaches into employment from college to work and remove barriers to applying to join the System workforce as part of our Anchor ambition.
- To identify ways to create a consistent and inclusive and compassionate culture to attract and retain our people across Derby and Derbyshire supported by a system EDI approach to feel part of the system workforce.
- To engage with system partners to test recommendations and findings and co-design our desired **future state**.
